Experience

Loblaw Companies Limited - TSE: L (Canada's largest food & pharmacy retailer) **Jan 2025 – Apr 2026**
Software Engineer *Toronto, Canada*

- Architected and built a distributed event-driven communication platform serving **220K+ users** across **2,500+ stores**, enabling low-latency, fault-tolerant messaging at national scale and increasing store compliance by **80%**.
- Improved production reliability by **93%** for a high-availability recalls platform using structured logging, distributed tracing, and fault isolation, reducing Sev-1 resolution time to under **3 hours** with **99.9% uptime**.
- Built an internal AI assistant using Azure OpenAI and RAG pipelines, integrating SharePoint, ServiceNow, and Workday APIs to automate employee support workflows and reduce HR support incidents by **30%**.
- Redesigned cross-cloud data pipelines using Azure Data Factory and Azure SQL views to pre-process high-volume GCP data overnight, reducing operational reporting latency from **5 minutes to 1.3 seconds**.
- Served on the Technical Review Board (TRB), reviewing **90+ CRQs** for architectural, reliability, and deployment risks prior to production rollout.

Rogers Communications - TSX: RCI (Canada's largest wireless provider) **May 2023 – Jan 2025**
Software Engineer *Toronto, Canada*

- Built a high-throughput billing validation service processing **3M+ records daily**, reducing billing error failures by **47%**, eliminating third-party dependencies, and saving **\$150K annually** in operational costs.
- Modernized legacy Excel-based billing workflows into RESTful microservices, improving processing efficiency by **200%** and enabling real-time billing updates for **10M+ customer accounts**.
- Optimized SQL query plans and indexing strategies for high-volume production workloads, improving query performance by **39%** and reducing bottlenecks in billing systems.

Projects

Distributed API Rate Limiter | *Java, Spring Boot, Redis, Distributed Systems* — [GitHub](#)

- Built a distributed rate limiter handling **5K+ req/sec** with **p99 latency under 85 ms** using Redis Lua scripts for atomic enforcement, with circuit breakers, fallback strategies, and observability tooling for resilient traffic control.

DoodleDocs – Real-Time Collaborative Drawing Platform | *Go, WebSocket, CQRS, Event Sourcing* — [Live Demo](#)

- Built a real-time collaborative platform using Go, CQRS, Event Sourcing, and WebSockets, enabling **sub-50ms** state synchronization for concurrent users through immutable event streams and read-optimized projections.

Technical Skills

Languages: Go, Java, C#, JavaScript, SQL

Backend & Distributed Systems: Microservices, REST APIs, API Design, Event-Driven Architecture, CQRS, Event Sourcing, Concurrent Systems, System Design

Cloud & DevOps: Azure, AWS, Docker, Kubernetes, Terraform, CI/CD, GitHub Actions

Messaging: Kafka, RabbitMQ, Azure Service Bus

Databases: SQL Server, MySQL, Redis, NoSQL

AI Systems: RAG Pipelines, LLM Integrations, Azure OpenAI, MCP

Education

Centennial College **Jan 2022 – Dec 2022**
Post Graduate Diploma in Software Engineering | GPA: 3.5/4.0 *Toronto, ON, Canada*

Guru Gobind Singh Indraprastha University **May 2017 – Dec 2020**
Bachelor of Computer Science | GPA: 9.4/10 *New Delhi, India*

Achievements

- Awarded a **\$5,000 performance bonus** for delivering high-impact distributed systems and improving production reliability across enterprise platforms.
- Mentored **5 engineers** through structured design reviews and technical guidance, improving code quality and reducing production defects by **39%**.
